

Painless knowledge networking...

 **JARIS**

knowledge-management system

create

Easy authoring tools allow anyone to create web documents in minutes. Use one of the built-in templates or even create your own. And since everything in JARIS is reusable, you don't waste time recreating content.

manage

Determine who needs to approve your documents, and JARIS will route them through your custom workflows. Give your documents launch and expiration dates, and JARIS will control publishing automatically. JARIS's automated features track your documents so you don't have to.

share

JARIS allows you to organize documents by categories and keywords—so everyone can quickly find the documents they need. And for on-the-fly information and updates, trackable alerts get the word out fast. You can even view usage statistics and user feedback for documents and alerts.
